LAUREN WYNNE

Product Designer for ML/AI Experiences | Product Design Technologist
814-746-6706 | 19laurenc@gmail.com | www.laurenwynne.com | Boston, MA

Summary

Product designer who builds. I design how people review, steer, and trust AI, then prototype those interactions in code so users can test the real behavior. Background in data science, UX, and HCI. Experience working with and presenting to executive level leadership.

Experience

Lead Product Designer (AI / Agentic) / Senior Product Designer (AI / Agentic) July 2024 to Present

Klaviyo

Products: Composer | Marketing Agent

- Led Composer, Klaviyo's AI assistant, as lead designer across about 13 contributing teams from presenting it at a board meeting through GA. Defined the user-driven prompt-box model and chat interactions across cross-functional areas including Campaigns, Flows, Forms, Social, Analytics, HelpDesk and more. Established Composer's quality bar: prioritized a sources-transparency view after wrong-logo complaints, and replaced generic suggestion chips with page-relevant, suggestions. Built and shipped code regularly to make updates throughout various release stages.
- Shipped Marketing Agent, a 0-to-1 product, as lead designer working with engineering to cut scope while ensuring we met customer needs. Advocated for placement of in-line recommendations, which created a significant lift in adoption compared to other placements.
- Built Klaviyo's internal prototyping hub with Claude Code, adopted by about 10 of 15 designers contributing to Composer. Mentored designers on AI-prototyping craft and coached designers on Composer's overall infrastructure including content and tone, widgets, discovery initiatives, and overall interaction principles.
- Created and organized Klaviyo's first in-person R&D Lab, connecting about 35 customers directly with about 30 Klaviyo product, design, and engineering colleagues to shape roadmap decisions.

Senior Product Designer / Product Designer June 2021 to July 2024

Alteryx

Products: Machine Learning | App Builder | AiDIN Co-Pilot

- Redesigned the Machine Learning product after measuring user drop-off, cutting a 7-step flow to 3 steps and focusing on a less technical user.
- Designed and launched App Builder from scratch, reusing company patterns to encourage familiarity and adoption.
- Created the initial long-term strategic view of Alteryx's AI Assistant, AiDIN with senior executive leadership.

Data Scientist July 2017 – June 2021

U.S. Department of Defense

- Designed and developed the front end of a Jupyter notebook collaboration platform and a fully accessible training landing page; received the U.S. Intelligence Community Instructional Design and Development Team of the Year award.
- Led agency efforts in creating in-person, virtual, and self-paced Jupyter and Python training programs for non-technical analysts that increased technical depth while reducing class time by as much as 40%

Education

M.S. Information and Communications Technology (Web Design and Management) 2019

University of Denver

M.S. Information Sciences and Technology; B.S. Security and Risk Analysis 2017

Penn State

Certifications

NN/g UX Management Certification, 2024 | General Assembly UX Certification, 2019
